

REMO BAS-2301wifi

Not enough Wi-Fi coverage?

Need to "reach" distant location in your flat or a spot?

How do you connect to a remote Wi-Fi zone?

How do you share Internet with a friend?

How do you amplify weak Wi-Fi signal?

How...?

HERE IS OUR SOLUTION to increase Wi-Fi coverage in specified direction,

REMO BAS-2301Wi-Fi Antenna

is designed for outdoor mount, but may be installed indoors. It operates with Wi-Fi routers with external removable antennas , having circular directional pattern.

It provides **increase of Wi-Fi coverage area** up to a few times.

Specifications:

Positioning of the antenna: outdoors, indoors

Communications format:

.....Wi-Fi (IEEE 802/11b/g/n)

Operating frequencies, MHz:2400 - 2500

Gain, dBi: 14

Impedance, Ohm: 50

Dimensions, assembled, mm 240x240x20

Cable length, m..... 5

Antenna weight, not more than, kg..... 0.3

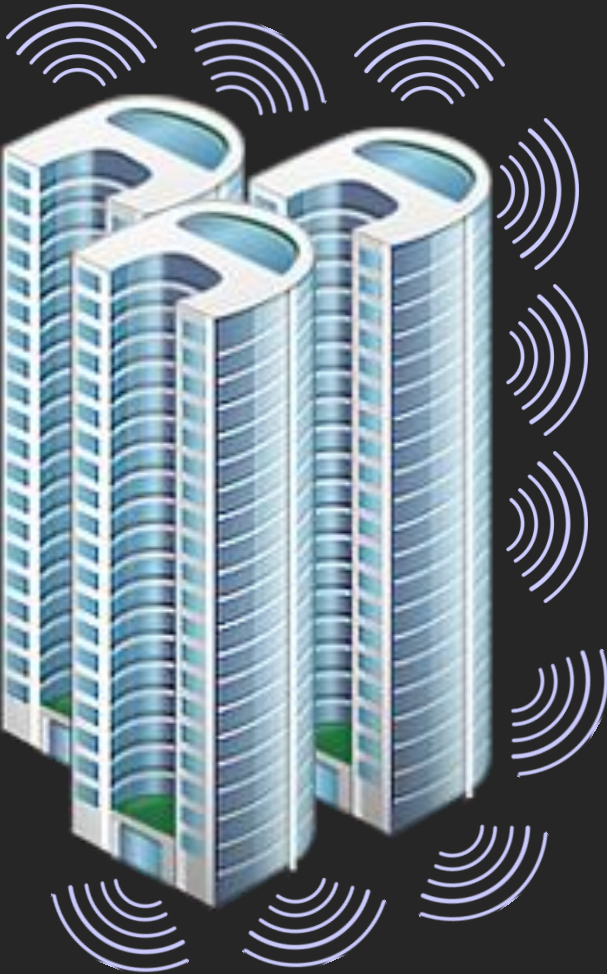

Communications range is up to 2 km using
standard Wi-Fi router.

Antenna is equipped with mount fitting, and may be installed on the [mast](#) or [bracket](#) with diameter of up to 50 mm, thus enabling to perform fine tuning in specified direction.

The antenna is provided with RPSMA plug and 5 m cable to connect to a router.

With **REMO BAS-2301WiFi** antennas you may, for example:

- get signal from the nearest open Wi-Fi network*
- share Internet with a friend living in a house across
- distribute Wi-Fi Internet to a specified direction
- establish a communication channel between two routers using "point-to-point" connection

* - a user is responsible for unauthorized entry into "secured" network

Other Wi-Fi solutions

If Wi-Fi router antenna is not removable, and/or economic solution is required, – take "WiFiDirect" AMPLIFIER

It is related to Wi-Fi Routers accessories.
